PROFESSIONAL SUMMARY

Driven software engineer with expertise in interactive technology and media, AI systems, and computer graphics.

EDUCATION

University of Southern California

B.F.A in Game Development and Interactive Design

Minors in Computer Science & Artificial Intelligence Applications

GPA: 4.0/4.0

Relevant Coursework: Discrete Methods in CS, Basics of AI, Applied Python, Advanced Games Project

Los Angeles, CA

Expected May 2028

EXPERIENCE

BebopBee, Inc.

Software Engineering Intern

Mercer Island, WA (Remote)

June – August 2025

- Architected and deployed 5 autonomous AI agent systems integrating REST APIs with custom JSON parsing, automating 95%+ of manual workflows across in-game content generation, marketing, and project management
- Developed scalable server-side systems using BrainCloud (JavaScript) and Unity (C#) for real-time player tracking, leaderboard ranking, and chat moderation, processing live data streams to enhance player engagement
- Built automated lighting pipeline with programmatic normal map generation (C#) to render sprites as 3D objects

AiFi

Software Engineering & UI/UX Intern

Burlingame, CA

June – July 2023

- Developed 3D visualization system processing computer vision positional data to generate digital 3D human representations, enabling retail partners to analyze customer movement patterns and spatial behavior
- Built real-time product interaction visualization in C# processing computer vision event streams, implementing dynamic colorization to highlight AI-detected customer-product interactions in retail environments
- Redesigned client-facing database interfaces and camera feed analysis tools through iterative prototyping in Figma and Unity, conducting usability testing that improved operational workflow efficiency by 40%

Narika

Technical Animator

Fremont, CA

June – August 2023

- Produced 3D animation for dating violence curriculum, managing end-to-end pipeline from modeling to rendering

LEADERSHIP & PROJECTS

Light-Beam Platformer

Software Developer

November 2025 – Present

- Developed a 3D platformer in Unreal Engine 5 (C++ and Blueprints) featuring real-time procedural geometry spawning through raycast detection and dynamic navigation mesh updates for AI-driven enemy behaviors

ProductSC | Riot Games

Technical Product Manager

September – December 2025

- Defined technical architecture and developed functional prototype for in-client esports engagement solution alongside product manager and designer, recognized by Riot Games leadership as strongest for technical feasibility and impact with features recommended for implementation

Open Alpha

Programming Lead

September – December 2025

- Led 20+ person development team as Programming Lead, implementing core gameplay systems in Unity (C#) while managing task allocation from design macros, code reviews, and Git workflows

TECHNICAL SKILLS

Languages: C++, Python (TensorFlow, Keras, NumPy, scikit-learn, pandas), C#, Java, JavaScript, SQL, HTML/CSS

Tools: Unreal Engine, Unity Engine, GitHub, Perforce, Jira, MySQL, REST APIs, VS Code, Figma

Specialized: Real-time Systems, Machine Learning, System Architecture, Game Development, Shader Programming
