EDUCATION

University of Southern California

Los Angeles, CA

B.A. in Game Development and Interactive Design

Expected May 2028

Minors in Computer Science and Artificial Intelligence Applications

GPA: 3.9/4.0; **ACT:** 35/36; **Relevant Coursework:** Data Structures & Algorithms, Applied Neural Networks, Introduction to C++, Applied Python, Discrete Methods in Computer Science, Advanced Games Project

PROFESSIONAL EXPERIENCE

Traeco, Inc. ↗

Los Angeles, CA

Co-Founder & Chief AI Officer

November 2025 – Present

- Co-founded Traeco, an AI agent optimization platform helping to reduce LLM call costs while maintaining output quality across development teams, publishing *traeco-sdk* (PyPI)
- Invited to pitch at Ring HQ by Founder/CEO, now piloting with Ring and integrating into their AI workflows
- Shipped an LLM judge evaluation pipeline (FastAPI, PostgreSQL) using stratified sampling and multivariate anomaly detection (cost, latency, tokens, errors), with a closed-loop system recalibrating recommendations against outcomes of accepted changes

Serve Robotics

San Carlos, CA

Software Engineering Intern, Simulation

May – August 2026

- Programmed and debugged intersection-crossing and crosswalk-routing logic (Python, C++) using simulated LiDAR and camera sensor inputs, running data generation to validate navigation behavior and train ML model
- Architected a custom Unreal MCP server to orchestrate a C++/Python simulation pipeline and generated training data for autonomy model, cutting process from 30+ to 5 min and enabling accurate navigation of new scenarios
- Ran distributed, concurrent multi-GPU workloads on Google Cloud Platform (GCP) with logging for reliability engineering, documenting test findings and handoff in READMEs and Notion for cross-team communication

BebopBee, Inc.

Mercer Island, WA (Remote)

Software Engineering Intern

June – August 2025

- Architected 5 AI agents (Python, OpenAI, REST APIs), automating 95%+ of content and marketing workflows
- Engineered live server-side systems (BrainCloud/JavaScript, Unity/C#) for player tracking, leaderboard ranking, and chat classification (iOS/Android)

AiFi

Burlingame, CA

Software Engineering Intern

June – July 2023

- Refined a pose-estimation pipeline on the OASIS platform, converting keypoint-tracking output into 3D skeletal representations to enable spatial analysis of shopper movement in live retail environments
- Built real-time C# visualization tooling fusing camera and RFID sensor streams, applying dynamic colorization to highlight customer-product interactions as they happen in-store

PROJECTS

Adaptive Pursuit

Solo Developer

January 2026 – Present

- Designing a pursuing AI enemy in Unreal Engine 5 (C++), a hybrid PyTorch PPO agent and online LSTM that learns and predicts player movement in real time

Floodsong

Lead Engineer, Graphics & VFX Programming

May 2026 – Present

- Owning the interactive water shader (HLSL, OpenGL, Unity) and associated player combat mechanics as one of six lead engineers, collaborating directly with art and design

Rally – Riot Games

Technical Product Manager & Developer

September – December 2025

- Built a full-stack prototype (React/TypeScript, Node.js) alongside a PM and designer to enhance player engagement and platform monetization
- Pitched to Riot leadership, resulting in product features being considered for production implementation

TECHNICAL SKILLS

Languages: C++, Python, C#, JavaScript/TypeScript, Java, SQL

Graphics & Game Dev: Unreal Engine, Unity Engine, HLSL, OpenGL, Vulkan

AI/ML: PyTorch, scikit-learn, NumPy, Pandas, OpenAI/Anthropic SDKs

Web & Cloud: React, Node.js, FastAPI, PostgreSQL, REST APIs, Docker, Git, Google Cloud Platform
