EDUCATION

University of Southern California

B.A. in Game Development and Interactive Design

Minors in Computer Science and Artificial Intelligence Applications

GPA: 3.9/4.0; **ACT:** 35/36

Relevant Coursework: Data Structures & Algorithms, Basics of AI, Introduction to C++, Applied Python, Discrete Methods in Computer Science, Advanced Games Project, Intermediate Game Development

Los Angeles, CA

Expected May 2028

TECHNICAL SKILLS

Languages: C++, Python, C#, JavaScript/TypeScript, Java, SQL

AI/ML & Graphics: PyTorch, OpenAI/Anthropic SDKs, Unreal Engine, Unity Engine, HLSL, OpenGL, Vulkan

Web & Tools: React, Node.js, FastAPI, PostgreSQL, REST APIs, Docker, Git

PROFESSIONAL EXPERIENCE

Serve Robotics

Software Engineering Intern, Simulation

Los Angeles, CA

May 2026 – Present

- Built a Claude Code-orchestrated procedural 3D content-generation pipeline for simulated towns (Unreal Engine, Python, gRPC, Vulkan), reducing 30+ min manual process to 5 min automated pipeline
- Programmed intersection-crossing logic (Python, C++) for simulated robot, supporting autonomy model training
- Developing a real-time animation system with prompt-to-animation tooling for Unreal MetaHumans

BebopBee, Inc.

Software Engineering Intern

Mercer Island, WA (Remote)

June – August 2025

- Architected 5 AI agents, automating 95%+ of content and marketing workflows using OpenAI and other REST API integrations (Slack, Trello)
- Engineered live server-side systems (BrainCloud/JavaScript, Unity/C#) for player tracking, leaderboard ranking, and chat classification for a mobile game (iOS/Android)

AiFi

Software Engineering Intern

Burlingame, CA

June – July 2023

- Refined a computer-vision-to-3D pipeline, converting joint tracking to skeletal representations for spatial analysis
- Developed live customer-product interaction visualizations with C# by processing vision/RFID sensor-fusion

PROJECTS

Traeco, Inc. ↗

Co-Founder & Chief AI Officer

November 2025 – Present

- Co-founded Traeco, an AI agent cost-optimization platform, publishing *traeco-sdk* (PyPI) and piloting with design partners including Amazon's Ring
- Architected an LLM evaluation pipeline (FastAPI/PostgreSQL, React, OpenAI/Anthropic SDKs) using prompt engineering and automated judge scoring to assess output quality
- Built a Retrieval-Augmented Generation (RAG) recommendation engine that analyzes usage history to suggest cost-saving model switches and prompt optimizations, powered by Machine Learning (ML)

Floodsong

Lead Engineer, Graphics & VFX Programming

May 2026 – Present

- One of six lead engineers, individually owning HLSL shader programming for interactive water effects

Adaptive Pursuit

Solo Developer

January 2026 – Present

- Built a procedural parkour game in Unreal Engine 5 with an online-learning AI enemy, training a custom PyTorch PPO agent with LSTM-based behavioral cloning through a full training run to a working checkpoint

Stitchlings ↗

Lead Graphics Programmer & Technical Artist

January – May 2026

- Created a procedural snow shader (HLSL, OpenGL, Unity) with raycast-driven, noise-based distribution and adjustable lighting, plus full VFX for boss encounter
